SEVEN REASONS TO GO PLASTIC – FREE

BROUGHT TO YOU BY PLAN AND THE PLASTIC POLLUTION COALITION

1. Single- use disposable plastic have a Massive Carbon Footprint, Whether made from petroleum or plants, plastic manufacturing is not efficient due to the scale of production.
2. Both the production and disposal of single- use plastics often emit massive amounts of dioxins, a highly, toxic byproduct linked to increased cancer rates and other Human Health Effects.
3. Plastic Last Forever: plastic can never be broken down by natural processes; every particle of plastic that has ever been created still exists in a form toxic to all terrestrial and marine life.
4. Plastics can be Challenging To Dispose Off. No all localities have the infrastructure to recycle single-use plastics; thus, many recyclable plastics take up valuable landfill space. When not able to be recycled or land filled, they are often sent to incinerators, emitting environment toxins into the atmosphere.
5. Plastic Poisons Our Food Chain: It is increasingly found in the ocean and guts of marine life, extending to affect the health of human populations who rely on fish and other marine life for food sources.
6. Going plastic-free can Save Your Money! Relying on reusable items enables you to avoid constant purchasing of disposable items.
7. Single-use plastic items perpetrate a Wasteful, Throw-away Culture. Our far
